

CHARLES PLANTEMOLI

SOFTWARE ENGINEER

Los Angeles, California | charlesplantemoli@gmail.com | (646) 629-8034 | [LinkedIn](#)

SUMMARY

Software engineer specializing in machine learning solutions and backend development. Built a real-time fraud detection model at a crowdfunding startup, and a RAG pipeline for natural language data queries. Led strategy and built technical deliverables for outside clients as a Project Manager at Crimson Consulting Group. Contributed to system architecture and internal workflows as an early technical hire at a B2B SaaS startup. Passionate about continuous learning and building systems that automate repetitive work so people can focus on what matters.

AREAS OF EXPERTISE

- | | | | |
|--------------|--------------------|------------------|----------------|
| • Python | • Machine learning | • Data Pipelines | • Hugging Face |
| • JavaScript | • Web Development | • APIs | • Next.JS |

PROFESSIONAL EXPERIENCE

Software Engineer, Lookie

Jul 2025 to Dec 2025

Lookie is a B2B SaaS startup simplifying the out-of-home advertising process, founded by a billboard broker. Worked directly with the founding team as an early technical hire, with no existing engineering processes or documentation in place.

- Contributed to system architecture decisions and internal workflows.
- Diagnosed data pipeline issues and briefed an external dev team on the codebase.

Project Manager, Crimson Consulting Group

Sept 2024 to May 2025

Crimson Consulting Group is LMU's student-run consulting organization, serving outside clients on business and technical projects. Split time between managing client strategy and building the technical deliverables directly.

- Led strategy and coordinated meetings for a happy hour discovery platform project.
- Built the data collection layer using web-based APIs.

ML Engineer Intern, SpotFund

Jun 2023 to Aug 2023

SpotFund is a crowdfunding startup. I was brought on to help address a fraud problem on the platform.

- Built a logistic regression model to detect crowdfunding fraud in real time.
- Cleaned and structured transaction data using Pandas for model training.

PROJECTS

Amazon Product Analysis Chat Interface

RAG-style chatbot for natural language queries over ~55K Amazon products (Keepa API). Converts queries to SQL, runs them on the dataset, and feeds results into an LLM for grounded responses. [GitHub Link](#)

RLinear Search

Recreated a research paper's algorithm for linear search over a semi-infinite line using a Q-learning agent. Designed reward shaping and state representation to match theoretical performance. [GitHub Link](#)

EDUCATION

Loyola Marymount University

Aug 2024 to May 2025

M.S. in Computer Science

Loyola Marymount University

Aug 2020 to May 2024

B.S. in Computer Science
